

Front end. Browser client in current state, can be fit for mobile later.

Node.js/Express

Simple Node.js and express routing.
Vue.js for frontend templates.

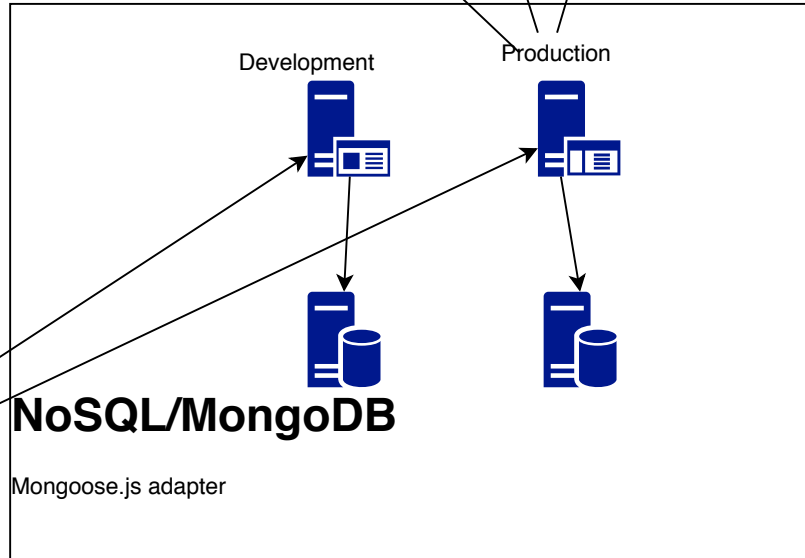

Openstack environment

Simple setup using GUI in current iterations. Later stages can evolve a CI/CD pipeline if relevant.

Git repository

Use simple deploy keys to development or production environment, possible to evolve to cron job for remote access or use webhooks to update state.

Development on local machines with push/merge to master repo on new features

NoSQL/MongoDB

Mongoose.js adapter
