Work done:
Analyse the problem, plan the solution

Stack: Dev/prod machines
frontend JS/vue
backend JS express, mongoose adapter
DB: mongoDB

---

17 jan presentation as a teacher technical point of view is interesting.
Requirement analysis are not needed since we have user stories.
Analysis is partially present in user stories already.

UML diagrams: domain model as a vocabulary for the customer.

Book recommendation: agile development with ICONIX process
Use UML for complex projects to understand the problem and communicate to the team

Lars sets user stories to sprints, do not do this!

Do not show product owner any technical details

Pär will talk to Jacob and get us openstack access

3856 **:** An administrator functionality to create new user roles. Can be command line or web GUI
3854: id password email type
3888: a welcome letter so they feel welcome.
3855: log in. Blank prototype is fine for now, will be gated to different features

assign story points in product backlog after sprint review.
